

ATTACK COVID-19 THE MILITARY WAY

Objectives:

1. Safe
2. Dependable
3. Easy to Deploy
4. Provide 24/7/365 Protection
5. Protect from infected people.
6. Cost Effective
7. Permanent Solution
8. Strong Warranty

Achievement:

CIMR actively seeks out pathogens like SARS-CoV-2 (COVID-19) germs, molds, viruses, and fungi in shared air and on surfaces. They are deactivated and destroyed. (See Figure 1 for details.) To date it has excelled in nearly 1,000 tests. CIMR has been in use against COVID-19 since February 2020 in more than 100 buildings worldwide (Military Bases, Universities, Hospitals, Nursing Homes, Schools, and residences). As of this date thousands of people ranging from newborns to 90-year olds have been benefiting from CIMR protected spaces. There is no known transference of COVID-19 in CIMR protected facilities. CIMR meets and exceeds the standards of the EPA, OSHA and the CDC as safe for human occupancy and carries the CARB (California Air Resources Board) rating for emitting zero ozone even on our largest units.

Figure 1: CIMR® Technology Overview

A simple, all-natural technology providing continuous air purification and infection control in all indoor environments. CIMR is a one-of-a-kind, patented technology that disinfects the air and all surfaces so all living things in an interior space are safe from infection and allergic reactions. CIMR's active agent is electrically charged hydrogen peroxide particles generated from the air. A unique ultraviolet light and catalytic converter - "Cell" - use water (H₂O) and oxygen (O₂) from the air to make GHP (gaseous hydrogen peroxide - H₂O₂) The microscopic particles have both localized positive and negative charges. They are literally drawn to viruses, fungi, mold and bacteria by electrostatic attraction. Microbes are then destroyed. When a free standing or HVAC CIMR system installed in a space the GHP sanitizer air and surfaces throughout any indoor environment within the first 24 hours, then provides continuous protection from re-contamination thereafter. Systems have a 3-year warranty. No chemicals are used. All that's needed is 3-year change of the Cell that converts room air into our active agent. (High-capacity units have multiple cells.) Spent sanitizer returns to water and oxygen. A system is saturated with GHP at 0.02 ppm. This is 1/50th of the OSHA maximum for long term exposure. It is safe plants and pets. It will eradicate insect trails so they can't find and infest the space.

Figure 2: MRI Global Labs Proof

An enriched batch of COVID-19 which in scale, represented over 200 COVID-19 positive people in a VW Bus, which represented a small office. The lab stabilized the test chamber with CIMR, then injected COVID-19 continually for 10-minutes. The results were outstanding 91% virus deactivation. When the natural 8% decay of COVID-19 was added the overall CIMR performance was 99% removal.
