

## Paradigm Shift

No COVID – No Mold – Mil Tech – No Tox

**CIMR® Deactivates** and eliminates viruses, bacteria, mold, and fungi both in the air and on surfaces. CIMR® has been successfully used for more than 12 years in a wide range of buildings, Military Bases, Universities, Schools, Hospitals and Long-term Care Facilities, Churches, Offices, Retail and Homes.

**Alton Holt** captured lightning in a bottle in 2005 when he invented CIMR® (Continuous Infectious Microbial Reduction). CIMR® rapidly inactivates and eliminates viruses including COVID-19, bacteria, germs, fungi, and molds as well as other volatile organic compounds (VOC's).

**Patents State**, “The methods and devices for providing microbial control and/or disinfection/remediation of an environment. The methods generally comprise generating a purified hydrogen peroxide gas .....and directing the gas into the environment such that .....it acts to provide microbial control and/or disinfection/remediation in the environment preferable both on surfaces and in the air.”

**CDC States**, COVID-19 spreads when an infected person breathes out droplets and very small particles that contain the virus. These droplets and particles can be breathed in by other people or land on their eyes, noses, or mouth. In some circumstances, they may contaminate surfaces they touch. Transmission of COVID-19 from inhalation of virus in the air can occur at distances greater than six feet. Particles from an infected person can move throughout an entire room or indoor space. The particles can also linger in the air after a person has left the room – they can remain airborne for hours.

**Act Now:** We match CIMR® units to your spaces from single rooms to auditoriums. They use moisture and oxygen to supply a continuous 0.02 – 0.03 parts per million everywhere air goes indoors. (Federal Agencies state fifty times that level is safe.) Pathogens and molecules of gaseous hydrogen peroxide are charged so attract each other. Peroxides destroys the pathogen leaving only the air and moisture it came from. No chemicals are involved. No hazardous residuals remain. The CIMR H<sub>2</sub>O<sub>2</sub> generator is connected to a standard power supply with minimal attention until the converter cell is renewed at year three.\
