

CIMR® IS ACES

CIMR® (Continuous Infectious Microbial Reduction) sanitizes air and surfaces in shared spaces 24-7-365.

A - Automatically
C - Continuously
E - Effectively
S - Safely

Automatically
CIMR® breakthrough patented photocatalytic low-level

hydrogen peroxide generator produces H₂O₂ gas from indoor humidity and oxygen. There are no consumables. Only the power for the light bulb is required. It is a “plug and play” device that operates for a year or more.

Continuously

CIMR® treated shared spaces are maintained at 0.02 ppm that is double to minimum EPA certified effective dosage and 1/50th of the 1 ppm exposure limit making it safe for pets, humans, plants, and possessions.

Effectively

CIMR® generated GHP molecules diffuse through the air like any other gas, even into cracks and crevices. They are drawn to microbes by electrostatic attraction with instant disinfecting action. This makes GHP gas far more effective than hazardous H₂O₂ water solutions where the water blocks charge attraction. Active pathogen infection control technology can be safely used in occupied spaces 24/7/365.

Safely

CIMR® is a no-touch system. Everywhere air goes is sanitized even behind walls, in fabrics and potting soils. GHP treats indoor air to deactivate, then eliminate airborne pathogens and disease transference. HVAC systems are cleaned, then kept clean. Mold deposits become a harmless white powder removed by filters. Dangerous cleaners are not required. Where soil removal or insect control is needed find our all-natural products at: <https://www.greensafeworldwide.com/copy-of-cimr>

Summary

CIMR® tech was invented to meet an unfilled antimicrobial requirement by our military, FEMA, and Homeland Security. CIMR® works better and costs less than all others. It was in its second decade defeating mold and ready to defend against biological weapons when COVID-19 appeared. CIMR® has a zero-transmission performance record defeating that threat too.
