Nutrient Enhancers - No Poison Pest Control

Tomatoes - Cucumbers - Peppers, Melons: Gary P. Apple Valley, MN is an 8th generation farmer growing indoors and outdoors. This is his 5th year applying GreenSafe™ Nutrient Enhancers. He grows sweet corn, tomatoes, cucumbers, peppers, melons, and hemp. He says the products give him an average increase of 30% across the board making him a happy farmer. His purchase of 35 thousand dollars in our products puts more than \$300,000 in his pocket. That is before he adds his 30% to his farm store inventory plus average savings on pesticide, herbicide, and fertilizer. And, he has no bug problems.

Herbicide Spill: California Farm Manager, Chuck S. said, "One of my employees accidentally spilled a toxic herbicide on the ground (full strength) and for over a year nothing would grow on that soil. Nothing, not even a weed." So, I thought, great opportunity to prove a point that Plant Amendment would clean the soil. Chuck told me after following my application directions weeks later grass was growing in the area. He is a Green-Safe-Solutions customer.

Peppers: Kurt & Janet called from Hawaii to say they are very excited about the increase in production of their two-acre vegetable farm.

Janet said when they pick peppers from their 100-foot row they used to get one 5-gallon bucket full per row. Now she is picking two 5-gallon buckets per row. Kurt sprays the ground before he plants, then he sprays his plants once per week.

Tomatoes: Peppers - Oranges - Blueberries - Henry M. in Baton Rouge called to say during the past twelve years, I've attempted to grow Satsuma, blueberries, tomatoes, and peppers with limited success. This season, at the suggestion of my neighbor, I reduced the amount of fertilizer applied to my fruit trees and vegetables by approximately 80% and applied your products. The fruit trees responded within two weeks with tremendous growth. They are yielding fruit for the first time in years. My tomato yields soared from an average of a dozen or so to about 65 per plant. My pepper yields are averaging about 90 per plant compared to previous yields of a few dozen. It is now (mid-August) past the normal season, but they are continuing to yield.

Strawberries - Black Raspberries - Green Beans - Tomatoes: Spoke with Tom L. in Findlay Ohio who said fruit is beautiful with no yellow leaves. They look healthy and dark green. Black raspberry vines are healthy and glossy, and leaves are nice. No problems. Planted green beans in 400 ft. rows - great harvest and healthy, chopped up & plowed under 2+ weeks ago. The plants came up again and are now more than five inches tall and he is seeing all new flowers and fruit again. This has never happened before. He believes he will harvest another crop before

fall. Tom called back a few weeks later to say comparing with another crop not sprayed and is very impressed with his green beans and tomatoes. Tomato Plants are green healthy and producing excellent tomatoes very high percentage of NO cracking and rating them a #1 select. And he's picking beans and picked over 4 lbs. and would have a lot more but the deer love them too. He'll pick a bunch more before freeze.

Blackberries: I sprayed these blackberries 4 times customers said 4 times more than normal the largest he's ever seen.

Tomatoes: Farmer Report: Farmer Report: "2018, the first year I used Green-Safe-Solutions products. My results were beyond what could ever have imagined. It started when he added 4-ml/gal of Plant Amendment to my greenhouse irrigation water. I saw double the root stock.

My seedlings took up all the nutrient offered, then overflowed my four- and six-inch pots. And they didn't go into transplant shock when I moved them outdoors. That never happened before. My harvest showed a 50% increase. His first harvest was 1920 pounds on 30-acres, all U.S. No. 1. All my produce increased more than 35%. And tomato shelf life tripled with no spoilage after washing them with a rag soaked in Foliar Spray. Plus, the mosquitos were gone. In past years special clothing was needed. Scott said, "They even bite your eyes!"

Peppers: Kurt & Janet called from Hawaii to say they are extremely excited about the increase in production of their two-acre vegetables farm. Janet said when they pick peppers from their 100-foot row they used to get one 5-gallon bucket full per row. Now she is picking two 5-gallon buckets per row. Kurt sprays the ground before he plants, then he sprays once per week with GreenSafe.
