

Paradigm Shift

No COVID – No Mold – Mil Tech – No Tox – Mil-Spec

CIMR® Deactivates and eliminates viruses, bacteria, mold, and fungi both in the air and on surfaces. CIMR® systems have been successfully used to stop infection and remediate mold and mildew for more than a decade in a wide range of buildings, Military Bases, Universities, Schools, Hospitals and Long-term Care Facilities, Churches, Offices, Retail and Homes with no reported transmission.

Mother Nature's Sanitizer is 0.02-0.03 ppm gaseous hydrogen peroxide (GHP). CIMR patented technology produces that GHP level from the oxygen and moisture in the air. It maintains that GHP level in shared spaces 24-7-365. That level is 50 times lower than the OSHA – NIOSH – ACGIH exposure limit. The unit “power on and forget” is low care with no consumables except a converter cell change at year 3.

Alton Holt captured lightening in a bottle in 2005 when he invented CIMR® (Continuous Infectious Microbial Reduction). CIMR® supplies GHP as and where needed to rapidly inactivate and eliminate viruses including COVID-19, bacteria, germs, fungi, and molds as well as odor causing volatile organic compounds (VOC's).

Patents State in part, “... methods and devices for providing microbial control and/or disinfection/remediation of an environment. The methods generally comprise generating a purified hydrogen peroxide gasand directing the gas into the environment such thatit acts to provide microbial control and/or disinfection/remediation in the environment preferable both on surfaces and in the air.”

CDC States, “COVID-19 spreads when an infected person breathes out droplets and very small particles that contain the virus. These droplets and particles can be inhaled by others or land on their eyes, noses, or mouth. In some circumstances, they may contaminate surfaces and fabrics they touch. Transmission of COVID-19 from inhalation of virus in the air can occur at distances greater than six feet. Particles from an infected person can move throughout an entire room or indoor space. The particles can also linger in the air after a person has left the room – they can remain airborne for hours.”

Act Now: We match CIMR® units to your spaces from single rooms to large auditoriums. The units use moisture and oxygen from the air to supply a continuous 0.02 – 0.03 parts per million everywhere air goes indoors. (Federal Agencies state fifty times that level is safe.) No hazard chemicals are used. Pathogens and molecules of gaseous hydrogen peroxide are charged so attract each other. Peroxide destroys the pathogen breaking down into moisture and oxygen. The oxidation reaction is not subject to resistance. No chemicals are involved. No hazardous residuals remain. The CIMR H₂O₂ generator is connected to a standard power supply. Minimal attention is required. The only consumable is the converter cell renewed at year three.

Glossary:

NIOSH – National Institute for Occupational Safety and Health

OSHA – Occupational Safety and Health Administration

ACGIH – American Conference of Governmental Industrial Hygienists

ppm – parts of a substance per million parts of air
